Computer Physics Communications

Contents to volume 86

Computational physics

Jansen, A.P.J.
Monte Carlo simulations of chemical reactions on a surface with time-dependent reaction-rate constants 1

Reale, F.
Thermal conduction in a 2-D FCT plasma hydrodynamic code 13

de Fainchtein, R., S.T. Zalesak, R. Löhner and D.S. Spicer
Finite element simulation of a turbulent MHD system: comparison to a pseudo-spectral simulation 25

Chinn, C.R., A.S. Umar, M. Vallières and M.R. Strayer
Microscopic nuclear structure on a parallel platform 40

Borbély, I. and T. Vertse
Inhomogeneous Schrödinger equation for anti-bound and resonant states 61

Scrinzi, A.
A 3-dimensional finite elements procedure for quantum mechanical applications 67

Tafelmayer, R. and K.H. Hoffmann
Scaling features in complex optimization problems 81

Jorquera, H.
Simple algorithm for solving linear integrodifferential equations with variable limits 91

Vattulainen, I., K. Kankaala, J. Saarinen and T. Ala-Nissila
A comparative study of some pseudorandom number generators 209

Kutteh, R. and J.B. Nicholas
Efficient dipole iteration in polarizable charged systems using the cell multipole method and application to polarizable water 227

Kutteh, R. and J.B. Nicholas
Implementing the cell multipole method for dipolar and charged dipolar systems 236

Berkov, D.V. and N.L. Gorn
Reconstruction of the velocity distribution in conducting melts from induced magnetic field measurements 255

Computer programs in physics

Bergdolt, G.
Tilted irreducible representations of the permutation group 97

Fack, V., S.N. Pitre and J. Van der Jeugt
New efficient programs to calculate general recoupling coefficients. Part II: Evaluation of a summation formula 105

Ortiz, F. and J.M. Los Arcos
DYEFIC: LSC efficiency computation at the dynodic output of PMTs 123

Garcia, F., O. Rodriguez, V.A. Rubchenya and E. Garrote
DENCOM: Code for level density calculations of deformed nuclei using a combined method 129

Jung, H.
Hard diffractive scattering in high energy collisions and the Monte Carlo Generator RAPGAP 147

Kaabar, W. and R. Devonshire
DIFCARS:. A versatile model of CARS signal generation 162

Tennyson, J., J.R. Henderson and N.G. Fulton
DVR3D: for the fully pointwise calculation of ro-vibrational spectra of triatomic molecules 175

Bazzani, A., M. Giovannozzi and E. Todesco
A program to compute Birkhoff normal forms of symplectic maps in $\mathbb{R}$ 199

Kobayashi, R., M. Konuma and S. Kumano
FORTRAN program for a numerical solution of the nonsinglet Altarelli-Parisi equation 264

Marshall, D., M. McCartney and D.S.F. Crothers
ION2 – Calculation of single ionisation total cross section using the continuum distorted-wave eikonal initial-state approximation 279

Shida, K. and S. Yamada
Reduced event-list on an array for many-body simulation 289

Hendrikse, Z.W., M.O. Elout and W.J.A. Maaskant
Computation of the independent elements of the dynamical matrix 297

Hamilton, K.G.
Erratum: A universal GFSR random number generator for personal computers [Comput. Phys. Commun. 85 (1995) 127–152] 208

Brown, D., J.H.R. Clarke, M. Okuda and T. Yamazaki
Erratum: A domain decomposition parallel processing algorithm for molecular dynamics simulations of polymers [Comput. Phys. Commun. 83 (1994) 1–13] 312
